DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

1. Claims 1-3 are rejected under 35 U.S.C. 102(e) as being anticipated by US Patent No.6240231 to Ferrera et al.

Catheter shaft including an inner member defining an outer surface thereon; and a first layer disposed over at least a portion of the outer surface of the inner member, the first layer including a selectively curable material, the selectively curable material at least partially cured at desired portion thereof to later the flexibility of the support member at the desired portion. The first layer could contain epoxy or Ultraviolet cured. (Col.4, lines1-10)

2. Claims 1, 4-6 are rejected under 35 U.S.C. 102(e) as being anticipated by US Patent No.6562021 to Derbin et al.

Catheter shaft including an inner member defining an outer surface thereon; and a first layer disposed over at least a portion of the outer surface of the inner member, the first layer including a selectively curable material, the selectively curable material at least partially cured at desired portion thereof to later the flexibility of the support

member at the desired portion. The first layer could contain ultraviolet cured. (Col.8, lines 35-50) The second layer includes a first wire ribbon, which is wound in a helical pattern in a first direction. (Col.11, lines 10-30)

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 7-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over US patent No.6240231 to Ferrera et al or US Patent No.6562021 to Derbin et al.

As mentioned above both Ferrera and Derbin teach the invention except for fourth and fifth layers to the catheter shaft. However it would have been obvious to have duplicated part for a multiple effect such as better flexibility range-In re Haraza, 274 F.2d 669, 671, 124 USPQ 378, 380 (CCPA 1960)

Response to Arguments

4. Applicant's arguments with respect to claims 1-10 have been considered but are moot in view of the new ground(s) of rejection.
